TRIGGER DETAILS

Name

New\_Data\_Insert\_Trigger

Enabled

ON

Event Ordering

By default, database trigger events are processed sequentially. Turning Event Ordering off will allow requests to be processed in parallel and more quickly if many matching events are created at the same time. Learn more about [ordered triggers](#).

Collection Name

dailyReports

Operation Type

This trigger will only execute on these operations.

☒ Insert ☐ Update ☐ Delete ☐ Replace

Full Document

By turning on Full Document, you will receive the document created or modified in your [change event](#). For Delete operations, the full document will not exist. For Insert or Replace operations, the full document will always be sent.

ON

Document Preimage

By turning on Document Preimage, you will receive the document that was modified or deleted **before** your [change event](#). For Insert operations, the document preimage will not be sent.

OFF

FUNCTION
